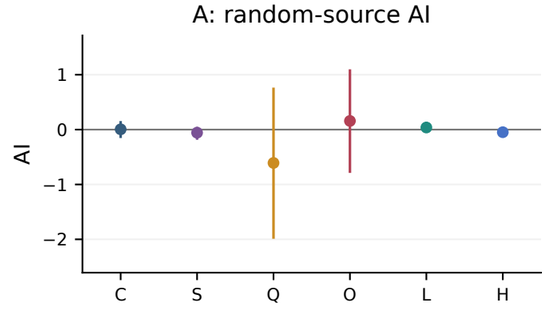
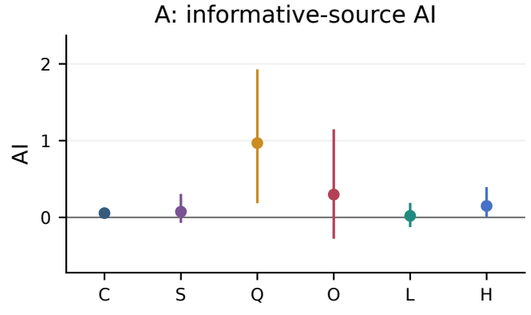
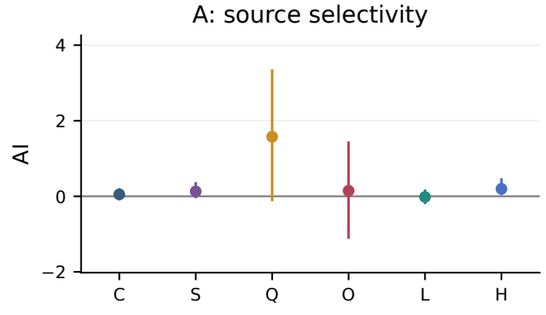
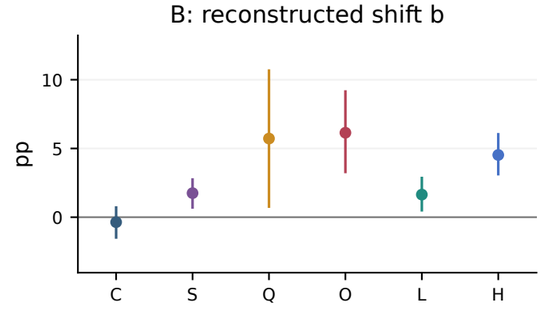
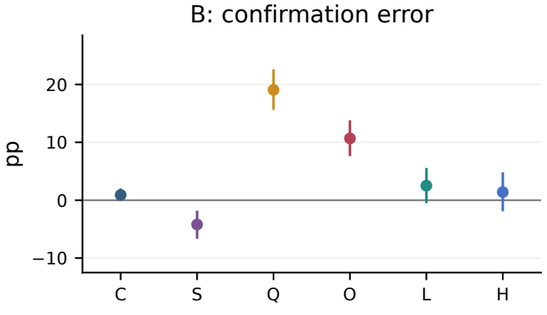
Fourteen descriptive response-format differences

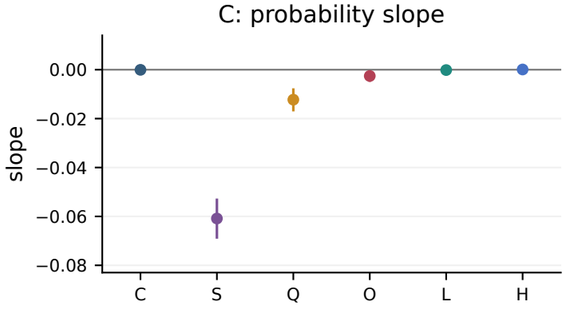


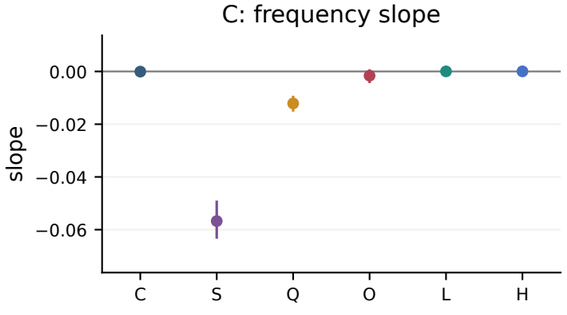


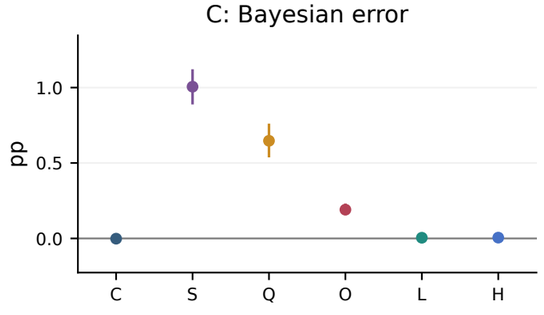


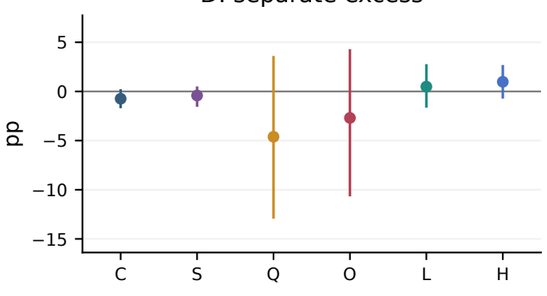


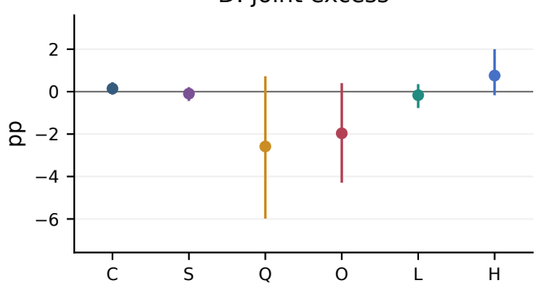


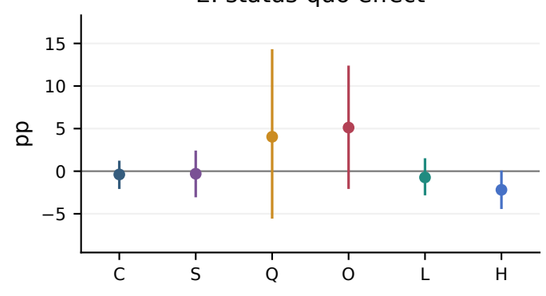


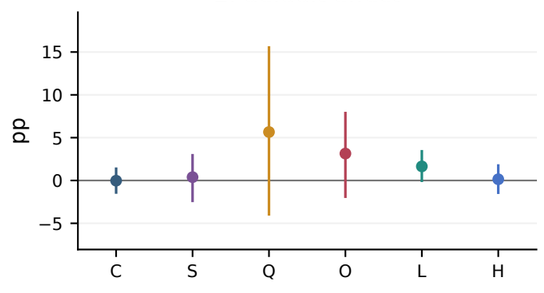


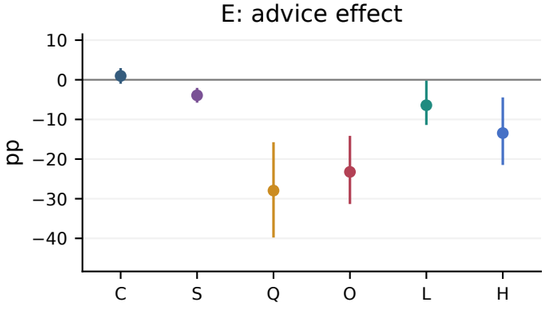


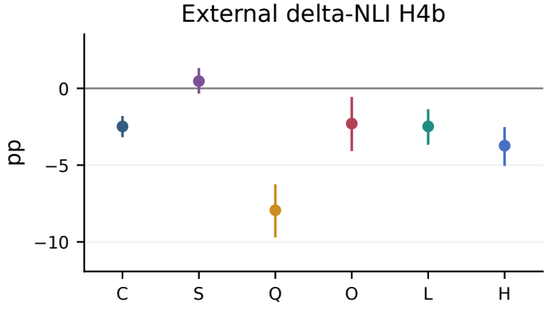












Each panel uses its native scale.

All contrasts are multi minus direct.

Not a global attenuation estimate.

Intervals crossing zero
do not establish equivalence.

External delta-NLI:
separate frozen H4b results;
not new Psych3 tests.

Paired denominators are recorded
for every point in figure_data.json.

C = codex; S = Sonnet 5.5; Q = Qwen3; O = gpt-oss; L/H = Flash low/high. Unadjusted 95% cluster-bootstrap intervals.

Quantity panels retain frozen operational definitions; they are not relabeled confirmatory hypothesis IDs.
